HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it *MUST* be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Matthew Hinsch on March 13, 2008.

The application has been amended as follows:

IN THE CLAIMS:

1. A method for detecting a control polynucleotide in a multiplex amplification reaction, the method comprising,

providing:

(1) a fluorescently-labeled nucleic acid probe;

(2) a first primer pair comprising a first and second primer, wherein the first primer pair is sufficient to amplify a first target sequence by polymerase chain reaction;

(3) a second primer pair and a third primer pair sufficient to amplify a second and third target sequence, respectively, by polymerase chain reaction;

(4) a single-stranded control polynucleotide comprising:

(a) a nucleotide sequence of the first primer and a nucleotide sequence (designated a "second primer binding sequence") that is complementary to the second primer; and

(b) located between said nucleotide sequence of the first primer sequence and said second primer binding sequence:

(i) the sequences of the primers of the second and third primer pairs or subsequences thereof that are at least 5 nucleotides long, and

(ii) a probe binding sequence that is complementary to said fluorescently-labeled nucleic acid probe;

amplifying the single-stranded control polynucleotide by polymerase chain reaction using said first primer pair, wherein said second primer is sufficiently complementary to said second primer binding sequence to allow for template-dependent extension of said second primer, and wherein said nucleic acid probe is sufficiently complementary to said probe binding site to allow for detection of said single-stranded polynucleotide sequence; and

detecting the presence or absence of the amplified control polynucleotide by detecting hybridization of the nucleic acid probe to the probe-binding sequence in the amplified single-stranded control polynucleotide, thereby detecting the control polynucleotide in a multiplex amplification reaction.

Claims 3, 4 and 6, 8 and 9, in line one insert "control" after "single-stranded"

Claim 5 in line one insert "control" after "single-stranded"

Claim 5 in line 2 insert "each of " after "comprises"

Claim 13 in line 2 insert "control" after "single-stranded"

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: The claims are drawn to a method of testing primer integrity in a multiplex amplification reaction where a single-stranded polynucleotide is used comprising the sequences or subsequences (at least 5 nucleotides in length) of all of the primer pairs in the mixture required to amplify at least 3 target sequences. The prior art does not teach or suggest including a single stranded polynucleotide in a multiplex amplification reaction which comprises the sequences or subsequences (at least 5 nucleotides in length) of all of the primer pairs in the mixture required to amplify at least 3 target sequences.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
